

Horizon Training Centre

5th Annual Advanced Laparoscopic Hiatal Surgery Course

Upper GI Trainees / Consultants / StR6-8 / Post CCT

Thursday, 6th - Friday, 7th May 2021

Integrated live link theatre

Wet lab facilities

This two day Royal College of Surgeons approved unique course is designed to concentrate on aspects of advanced hiatal surgery that senior trainees may have limited exposure to in training and junior consultants may feel least confident with in their clinical practice. The course is based around interactive lectures, guest speakers and live link surgery. The course covers discussion around evidence for surgical practice, complex decision making involving patient selection, surgical techniques, management of complications and outcome data. As well as lectures, live link surgery is a strong element and will be used as a focus for discussion and demonstration of techniques.

PROGRAM
